

CLAIMS:

1. A woodwork drill bit equipped with a tip screw or a center auger at the center of its tip, wherein three spiral leads are formed on the bit, a raked blade is formed at the tip of each of the three spiral leads from the periphery toward the center, and a scribing blade is formed on the tip periphery of each of the three spiral leads in such a way that it sticks out forward of the raked blade.

2. A woodwork drill bit as described in claim 1, wherein a sharp blade point is formed at the forward tip of the tip periphery of each of the three spiral leads, and the raked blade extends from the blade point toward the center of the bit.
